RECOMMENDED BASE MATERIAL

Solid concrete is the best base material for installation. To ensure the proper anchors are shipped with your rack, ask your Dero Rack representative which anchor is appropriate for your application. Be sure nothing is underneath the base material that could be damaged by drilling.

⚠️ Be sure to save your tamper-resistant tools for any future maintenance. They are costly to replace.

TOOLS NEEDED

- Hammer drill
- 3/8” masonry bit
- Hammer
- Socket Wrench
- 9/16” socket
- 1/2” socket
- Tamper-proof socket (included)*
- Socket extension, 6” min.

1. Reference the Fixit setback recommendations and place the upright in the desired location. Use the base as a template and drill (4) 3/8” x 3” holes in the concrete with a hammer drill and masonry bit. Clean up all concrete dust from drilling.

2. Hammer in the (4) wedge anchors. Leave at least 3/4” of an inch of exposed threads above the Fixit base.

3. Decide which position the pump will be installed in and place the bottom pump flange over the corresponding wedge anchor. Attach the top pump flange to the Fixit upright with a carriage bolt, washer, and tamper-proof nut. Tighten all wedge anchors with washers and nuts.

- ¹ = Tamper-proof Nuts
- ⁵ = Standard Nuts

   Reserve one of the tamper-proof nuts to secure the tools.

4. Insert the tool cables into the cable slot on the Fixit upright.
Place the bike hanger in the desired position on top of the Fixit upright and attach with carriage bolts, washers and nuts. **Apply the tamper-proof nut to center bolt to secure tools.**

If you would like us to add your station to our online map, email the station’s geocoordinates to web@dero.com. These coordinates can be obtained by simply clicking a point on a Google Map.

**Concrete pad recommendations**

- **PAD 36" X 36" X 4"**
NOTE
All threads for all parts of the pump are right-hand threads. They tighten clockwise, and loosen counter-clockwise (“righty tighty, lefty loosey”). However, when you are looking top-town at a bolt that threads from underneath, if you move it counter-clockwise from your point of view, you are actually tightening, not loosening, the nut! This has led to some unnecessary breakage of pump parts. Be sure you are looking at the nut with the proper orientation before tightening or loosening.

REMOVING THE AIR KIT FROM THE FIXIT

1. Remove the tamperproof nut and washer on the side of the Fixit. Use the Penta tool supplied with the Fixit.
2. Remove the nut and washer at the bottom of the Fixit on the anchor.

CHANGING METAL HEAD™

Remove Metal Head™ by turning counter-clockwise. You will need a 3/4” wrench. Replace with new Metal Head and tighten.

If you are replacing a plastic pump head with a Metal Head, you will need to also purchase a replacement hose.

REPLACING TOOLS

There are three bolts at the top of the Fixit. Underneath are two 3/8” nuts, and one penta tamper-proof nut (center bolt). These are all best removed with a socket wrench, using the extension tool to enable you to reach the nuts. Once the nuts are removed, take off the cap to replace tools.
