Public Pump with Tire Gauge

The Air Kit 3 is built for outdoor public use. This robust bike pump features our new Metal Head™, a sturdy cast aluminum pump head with Presta and Schrader valve compatibility. The Air Kit’s waterproof PSI gauge is also helpful when filling up your bike tires. The pump hose is made of steel-reinforced hydraulic hose for added durability, and replacement pump head and gaskets are available on our website.

Patent US9,765,766 B2
Air Kits require occasional maintenance and replacing of parts to remain serviceable.

Supplement your Air Kit with our Pump Stop, a convenient accessory that holds bikes upright while filling your tires.

- Light Green
- Green
- Green 60%
- Sepia Brown
- Wine Red
- Slate
- Iron Gray
- Sepia Brown
- Bronze
- Silver
**Materials**
- Main Body: 6” tube
- Top: 1/4” polycarbonate
- Manual air pump: Dero made, max 160psi
- Foot: ¼” steel

**Finishes**
- Galvanized
  - An after fabrication hot dipped galvanized finish is our standard option.
- Powder Coat
  - Our powder coat finish assures a high level of adhesion and durability by following these steps:
    1. Sandblast
    2. Epoxy primer electrostatically applied
    3. Final thick TGIC polyester powder coat

**Mount Options**
- Surface
  - Surface Mount has 10” diameter x .25” flange with four anchoring holes for mounting with standard wedge anchors.

An optional Pump Stop is also available to hold bikes with no kick stands.
The Air Kit 3 should be installed at least 36” away from any obstructions.
Thread nuts onto anchors, leaving approximately 1/4" of the anchor protruding, and tap into surface. Place the 2 provided tamper-proof penta nuts on opposite sides. Tighten nuts down to secure pump.

Be sure to save your tamper-resistant tools for any future maintenance. They are costly to replace.
Note: All threads for all parts of the pump are right-hand threads. They tighten clockwise, and loosen counter-clockwise (“righty tighty, lefty loosey”). However, when you are looking top-down at a bolt that threads from underneath, if you move it counter-clockwise from your point of view, you are actually tightening, not loosening, the nut! This has led to some unnecessary breakage of pump parts. Be sure you are looking at the nut with the proper orientation before tightening or loosening.

AIR KIT 3 MAINTENANCE

1. Remove tamper-resistant screws and lift polycarbonate top and metal gauge plate.

2. Remove thumb-screw, lock washer and spacer.

3. Plunger assembly may now be pulled out. To replace gaskets, pry old gaskets off and clean piston. Apply new silicone grease and install new gaskets. Apply more silicone grease to new gaskets. Re-assemble and wipe off excess grease when done.

CHANGING PLASTIC PUMP HEAD

Remove the red heat-shrink covering the base of the pump head. Unscrew the pump head from the brass fitting (turning counter-clockwise). You will need to keep the brass fitting for the new pumphead. Replace the pump head.

If you will be replacing the heat-shrink, then put the heat-shrink sleeve over the hose before replacing pumphead. Once pump head is on, pull heat-shrink sleeve over the brass fitting and use a heatgun to shrink it.

CHANGING METAL HEAD™

Remove Metal Head™ by turning counter-clockwise. You will need a 3/4” wrench. Replace with new Metal Head and tighten.

If you are replacing a plastic pump head with a Metal Head, you will need to also purchase a replacement hose.
